

Rollerball Business Simulation

Rollerball is a complex business simulation focusing on all aspects of teamwork as well as inter team working. The team building exercise requires teams to cooperate in the construction of a free standing structure capable of delivering a ball under gravity through each team's construction area. The design has to meet customer needs, health and safety and be financially viable. The learning objectives are to emphasise the importance of collaboration across work groups. This activity is a great metaphor for the need for organisations to provide a seamless service or product delivery to their customers - this can only be achieved if all teams are aligned to the same goal.

A professional facilitator leads a team review to relate learning back to the workplace.

This high-energy business game can be run indoors or outdoors and really taps into teamwork - it is ideal as a conference event, an energiser, or to add a team building element to a meeting, seminar or training course.
